Spare Pair Vision Center

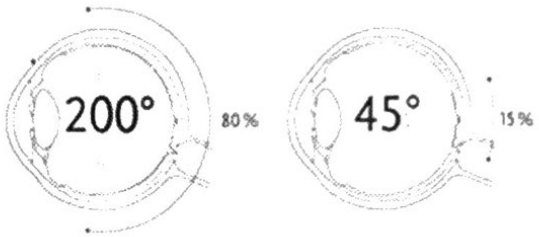

optos

WE ARE PROUD TO PROVIDE THE MOST ADVANCED TECHNOLOGY AVAILABLE TO DETERMINE THE HEALTH OF YOUR EYES

As part of your comprehensive eye exam today, the Optos Daytona will be taking a 200 degree scan of your retina, called an optomap. An optomap scan is the largest single view of the retina possible, enabling our doctors to detect vision threatening conditions that may have been previously undetected by other techniques.

Vision-threatening conditions possibly detected with an optomap include:

- Macular degeneration
- Glaucoma
- Retinal tears or detachments
- Ocular melanoma/tumors
- Diabetes
- High blood pressure

with optomap ultra-widefield retinal imaging

without optomap

Benefits of an optomap scan:

- No other retinal examination gives you a more extensive single-view scan.
- There will be an opportunity for you to view and discuss the scans with your Doctor today.
- The scan becomes a permanent record in your medical file, enabling your Doctor to make important comparisons to scans at future exams.
- Takes only seconds to perform.
- The Optos Daytona does NOT REQUIRE DROPS, is PAINLESS, and will NOT MAKE VISION BLURRY afterwards.

An optomap scan is an integral part of your comprehensive eye examination. Our doctors feel strongly that every patient should have an optomap scan performed annually. The cost for an optomap scan is **$35.00** and may not be covered by your insurance.

THIS SCAN WILL BE TAKEN TODAY UNLESS YOU DECLINE AND SIGN BELOW

○ **YES**, I do wish to take advantage of the advanced technology of an optomap scan today.

○ **NO**, I do not wish to take advantage of the advanced technology of an optomap scan today, despite having been educated on its benefits. I hereby release the doctors of Spare Pair Vision Center from any liability as a result of not having the scan taken today.
